An engine overhaul involves restoring the internal parts to the specifications of a new engine. During an overhaul, new piston rings are fitted and the cylinder walls are reconditioned (rebored and/or honed). If a rebore is done by an engineering works, new oversize pistons will also be fitted. The main bearings and connecting big-end bearings are

However, for engines 4G13 and 4G15 there is a correspondence of the name to the working volume: the first one has 1.3 liters, while the second one has 1.5 liters. The old MITSUBISHI engines (development before 1989) might not have the first digit in the name showing the number of cylinders, but they had a letter at the end (which means it is not known), and the names became similar to SUZUKI ...
