Treatment for more severe cases depends on the cause and extent of the collapse. The most common causes of atelectasis and their treatments include: Surgery: Nurses or respiratory therapists will guide you in breathing exercises and sitting or standing upright as soon as possible after surgery.

Atelectasis (at-uh-LEK-tuh-sis) is a complete or partial collapse of the entire lung or area (lobe) of the lung. It occurs when the tiny air sacs (alveoli) within the lung become deflated or possibly filled with

part or all of one lung. It is a condition
where the alveoli are deflated down to little
or no volume, as distinct from pulmonary
consolidation, in which they are filled with
liquid. It is often called a collapsed lung,
although that term may also refer to
pneumothorax.
