Flight Dynamics and Control of Aero and Space Vehicles Already one of the leading course texts on aerodynamics in the UK, the sixth edition welcomes a new US-based author team to keep the text current. The sixth edition has been revised to include the latest ...

The shear stress is equal to $\tau = \mu R \dot{\gamma}/h$. The area on which it acts is $2\pi r dr \times L$. Thus, the torque associated with this stress (force per unit area) is $dT = \tau r^2 dr \times L$. This needs to be integrated from $r = 0$ to $r = R$ to obtain the formula given. The power is equal to $2\pi n T = T \dot{\gamma}$. This is also what is given.
