Steps for Solving Linear Absolute Value Equations : i.e. $|x + 1| = 1$. Isolate the absolute value. 2. Identify what the isolated absolute value is set equal to... a. If the absolute value is set equal to zero, remove absolute value symbols & solve the equation to get one solution. b. If the absolute value is set equal to a negative number, there is no solution. c.

First isolate the absolute value expression on one side of the equation. $|3x + 9| - 10 = 4$ Write the equation. Add 10 to each side. $|3x + 9| = 14$

ABSOLUTE VALUE EQUATIONS AND INEQUALITIES. Solve . Solution . The absolute value of a number will be 0 only if that number is 0. Therefore, $|x + 5| = 0$ is equivalent to $x + 5 = 0$ which has solution set $\{-5\}$. Check by substituting into the original equation.

ABSOLUTE VALUE ABSOLUTE VALUE E.1 definition. ... given equation has the solutions $x = 3$ and $x = -3$. Appendix E: Absolute Value A45 is always less than or equal to the sum of the absolute values. This is the content of the following useful theorem, called the triangle inequality.

Solving Absolute Value Equations Date _____ Period _____ Solve each equation. 1) $3x = 9$ 2) $3r = 9$ 3) $b - 5 = 1$ 4) $6m = 30$ 5) $n - 3 = 2$ 6) $4 + 5x = 16$ 7) $2r - 1 = 11$ 8) $1 - 5a = 29$ 9) $2n + 6 = 6$ 10) $v + 8 = 2$ - ...

Solve the absolute value equation : Add 0.5 to each side. Divide each side by 0.5. So, the solution is $x = -12, 12$. If the absolute value equation $|2x + k| = 3$ has the solution $x = -2$, find the value of k. Because $x = -2$ is a solution, substitute $x = -2$ in the given absolute value equation. So, the value of $k = 1, 7$.

Example Absolute value equation: {NOTE - both solutions were checked!!} NOTE: If one of the solutions does not check (this means when you plug it in, the answer on each side of equation doesn't match) then you have an extraneous solution and you must cross it out.

29/10/2018 · We'll leave it to you to verify that the first potential solution does in fact work and so there is a single solution to this equation : $\left[x = \frac{1}{4}\right]$ and notice that this is less than 2 (as our assumption required) and so is a solution to the equation with the absolute value in it.

Solving Absolute Value Equations. Solving absolute value equations is as easy as working with regular linear equations. The only additional key step that you need to remember is to separate the original absolute value equation into two parts: positive and negative (\pm) components. Below is the general approach on how to break them down into two equations:
