1/2/2013 · Human dependence on technology will have implications for a new culture of communication. Culture is related to the person behind the presence of elements of verbal or visual communication through internet media. Communication established via the Internet, known as cyberspace, allows the presence of a person in a variety of virtual identities.

The results of this research also show that the citizens used the media in order to gain personal motives such as to get material benefits or to build a self-image. In the level of media space, the facilities provided by Kompasiana like a description of profile and comment column can be used for prosumer activity.

The book includes: • clear guidance on practicalities of the Internet

Abstract. It has long been assumed that families and family life have been affected over time by the various waves of 'new' media such as radio, television, video recorders, computers, multimedia and the internet (Van Rompaey et al. 2002).The extent of use of such technologies has been linked particularly with SES and education levels (Livingstone 1999), although gender is also said to ...
