12/7/2021 · Response-2000 is an easy to use sectional analysis program that will calculate the strength and ductility of a reinforced concrete cross-section subjected to shear, moment, and axial load. All three loads are considered simultaneously to find the full load-deformation response using the latest research based on the modified compression field theory.

Construsoft – Offers the programs : Xsteel, a 3D modeling system for steel structures; Powerframe, for analyzing structures in steel, concrete and timber and Powerplate, to analyze plates with using the finite element method (FEM). Description of programmes and services offered. Examples of structures developed with these programmes.

ANSYS Workbench SwiftComp GUI is a plugin to power ANSYS with efficient high-fidelity multiscale, multiphysics modeling for composites. It assures the best models at a given level of efficiency in any scale the user chooses, linking micromechanics and structural analysis.
