Soap is the salt of a weak acid. Most organic acids are weak acids. Consequently, hydrolysis occurs to some extent when soap dissolves in water. Soap solutions tend to be slightly alkaline (basic) due to partial hydrolysis of the acid. For part 2.4.1 Soap preparation at the end of this experiment, total soap produced is 3.1020g.

genetic variation, in which individuals within a population vary in the alleles that they have for certain traits. Variations in snail color, flower color, human blood type, and bacterial sensitivity to antibiotics are all forms of genetic variation. Often, these genetic traits pass from one generation to the next;
