Bosch Glow Plugs Question 1 Why do diesel engines require glow plugs and what function do they perform? Answer Unlike gasoline engines which use a spark plug to ignite an air/fuel mixture, diesel engines rely on the heat of highly-compressed air to ignite a precise amount of fuel to initiate combustion. Heating the air to a minimum

enables a fast engine start and improves the diesel engine's cold idle with lower emissions. Function The GLP2HS glow plug – and its robust, durable glow tube made from a special alloy – is located in the cylinder head. In a matter of seconds, the helical heating wire reaches the required temperature, permitting a long post glow for ...

11/6/2018 · Diesel glow plugs live a hard life. They are subject to extreme temperature changes and high combustion pressures. Since a diesel engine may have as many as 10 glow plugs, one for each cylinder, you may not notice when one goes bad. But if two, three or more go bad; you will notice the engine has become very difficult to start.
