A typical human red blood cell has a disk diameter of approximately 6.2–8.2 μm and a thickness at the thickest point of 2–2.5 μm and a minimum thickness in the centre of 0.8–1 μm , being much smaller than most other human cells. These cells have an average volume of about 90 fL with a surface area of about 136 μm^2 , and can swell up to a sphere shape containing 150 fL, without membrane ...

In evolutionary biology, abiogenesis, or informally the origin of life (OoL), is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but an evolutionary process of ...
