Table 1 gives data from an undrained triaxial | Chegg.com

Question: Table 1 gives data from an undrained triaxial compression test on a sample of normally consolidated soil in which the cell pressure was increased to and then held constant at $\sigma_3 = 300\text{kPa}$. At the start of the undrained shearing stage of test, the sample was 38mm in diameter and 76mm long and the initial pore pressure was $u_v = 100\text{kPa}$.
