Most construction contracts for construction projects require periodic schedule updates. A schedule update is an assessment of the project status and prediction of how and when the project will be completed. Proper updating of the work schedule is an integral part of project management and a critical communication tool between the parties.

Scheduling of the programming, planning and construction process is a vital tool in both the daily management and reporting of the project progress. c) Organizing: Organizing is concerned with decision of the total construction work into manageable departments/sections and systematically managing various operations by delegating specific tasks to individuals.

The planning and scheduling of construction projects using critical path methods have been discussed as two separate processes. Although the tasks performed are different, the planning and scheduling processes normally overlap. The ultimate objective of the project manager is to develop a working plan with

A Handbook for Construction Planning and Scheduling presents the key issues of planning and programming in scheduling in a clear, concise and practical way. The book divides into four main sections: Planning and Scheduling within the Construction Context; Planning and Scheduling Techniques and Practices; Planning and Scheduling Methods; Delay and Forensic Analysis.

The project time management planning function produces a developed project schedule and schedule management plan that is contained in, or is a subsidiary plan of, the project management plan. This schedule management plan may be formal or informal, highly detailed or broadly framed, depending on the needs of the project.
