In computer science, a binary tree is a tree data structure in which each node has at most two children, which are referred to as the left child and the right child. A recursive definition using just set theory notions is that a (non-empty) binary tree is a tuple (L, S, R) , where L and R are binary trees or the empty set and S is a singleton set containing the root.

Computer programming (also known as software development and software engineering) is the process of writing or editing source code. In a formal environment, a systems analyst will gather information from managers about all the business processes to automate. This professional then prepares a detailed plan for the new or modified system. The plan is analogous to an architect's blueprint.
