DC Motor Troubleshooting Based on the EASA TechNote

“Troubleshooting DC Motors” ALWAYS Disconnect the power before handling any parts of the electrical equipment Lock out and tag out all electrical circuits Test for voltage before touching any components

Read Electric Motor Troubleshooting Guide

Basic Electrical Troubleshooting A boiler feed pump being powered by two 3500 HP induction motors appears to be developing a problem. Failure of this pump will result in the loss of a generator currently producing half of the station's power output. Operators are complaining that a large compressor on several occasions has failed to start.
