End Emotional Eating Using Dialectical Behavior Therapy Skills To Cope With Difficult Emotions And Develop A Healthy Relationship To Food

[READ] End Emotional Eating Using Dialectical Behavior Therapy Skills To Cope With Difficult Emotions And Develop A Healthy Relationship To Food

Lifeline PCS

In our Dialectical Behavioral Therapy (DBT) groups, individuals learn skills for coping with their emotions and ways to communicate with others more effectively. DBT is a thorough evidence based approach that makes available the skills to regulate emotions that cause stress in one or more areas in their lives such as safety, work, and family relationships.

Feeding and eating disorders (FEDs) are serious mental health disorders that cause impairments in physical health, development, cognition and psychosocial function and can go undetected for months or years. They are characterised by disturbed eating behaviour associated with concerns about weight and shape or by disinterest in food, phobic avoidance or avoidance due to sensory aspects of food.
