Reading Fluid Mechanics For Petroleum Engineers.pdf

Fluid mechanics research conducted with non-Newtonian fluid systems now permits prediction of the behavior of these fluid systems in both laminar and turbulent modes of flow through circular pipes. Present work concerns non-Newtonian fluid systems currently used in the hydraulic fracturing process.

Fluid is a substance that deforms continuously when subjected to a shear stress, no matter how small that shear stress may be, based on that, both gases and liquids are classified as fluids. As its name suggests, fluid mechanics is the study of fluids either in motion (fluid dynamics) or at rest (fluid statics) and the subsequent effects of the ...
