Who was Gregor Mendel? •Gregor Mendel is the “Father of Modern Genetics.” He was an Austrian monk who studied heredity in pea plants. His work was published in 1865. •He described “factors” that were passed between generations of plants. •We now know the factors are genes: chemical factors that determine characteristics.

Suppose You Ran Across A Brown Male

Gregor Mendel, considered the father of genetics, studied pea plants by crossing them and noting the resulting offspring. Through his studies with pea plants, Mendel developed three principles or “laws” of inheritance: 1. The Law of Segregation: During reproduction, alleles are randomly separated into gametes during the process of meiosis. 2.
