With electricity, voltage is like the pump pressure, causing electricity to flow along the copper wire (Fig. 1b). As in a water pipe, there is some resistance to flow, but it is much less along the wire than it is through the insulation. Figure 1–Comparison of water flow (a) with electric current (b).

The following is sort of an electrical wire types chart: Black wires or “hot wires” carry live electrical loads from the electrical service panel to an outlet, light or other destination.; Red wires are also hot wires used to interconnect smoke detectors, so that if one alarm goes off, all the others do as well.; White and gray wires are neutral wires that connect to the neutral bus bar ...
