This paper argues that happiness research in fact poses no threat to the relatively libertarian ideals embodied in the U.S. socioeco-nomic system. Happiness research is seriously

happiness of other people and that governments should aim at creating greater happiness for a greater number of citizens (Bentham 1789). This classic philosophy is not only more accepted these days, but also more practicable, now that scientific research provides more view on the conditions for happiness (Veenhoven 2004).

Income is known to be associated with happiness<sup>1</sup>, but debates persist about the exact nature of this relationship<sup>2,3</sup>. Does happiness rise indefinitely with income, or is there a point at which higher incomes no longer lead to greater well-being? We examine this question using data from the Gallup World Poll, a representative sample of over 1.7 million individuals worldwide.

9/3/2011 · The literature on fertility and happiness has neglected comparative analysis. we investigate the fertility/happiness association using data from the world values Surveys for 86 countries. we find that, globally, happiness decreases with the number of children. this association, however, is strongly modified by individual and contextual factors. most importantly, we find that the association ...
