(Perotti). The simple equation of  $ax+b=0$  is an ancient question worked on by people from all walks of life. The power and progress in linear algebra did not come to fruition until the late 17th century. The emergence of the subject came from determinants, values connected to a square

Note that none of these primes can divide  $M+1$  (remainder is 1). But  $M+1 = q_1q_2q_3 \dots q_n$ , product of primes, by the Fundamental Theorem of Arithmetic. What are these primes  $q$ ? So there must be more primes than the ones factoring  $M$ .

The first to solve equation (1) (and maybe (2) and (3)) was Scipione del Ferro, professor of U. of Bologna until 1526, when he died. Henderson Equation We will discuss the limitations of the Henderson–Hasselbalch equation focusing on the titration curve of a weak acid with a strong base. Over much of the titration range, the calculation of pH relies on the Henderson–Hasselbalch equation,  $\text{pH} = \text{pK}_a + \log \frac{[\text{A}^-]}{[\text{HA}]}$  (1) where  $K_a$  is the dissociation constant of the weak acid, p ...
