Place your first finger on the fifth fret on the 2nd string. This is an E note. Tune the thinnest and last string to that, again by turning the 1st string's machine head until the tone of the 1st string dings with the fifth fret of the 2nd string. So you can see we tuned each string to the prior string.

If you're right-handed, put the guitar on your right knee. Note: classical guitarists would use their left knee. It's tempting to tilt the guitar so you can see the frets, but don't do it. Keep the guitar straight. The neck of the guitar should be angled slightly upward as it extends away from your body.

Tuning electric guitars with an electronic tuner works wonderfully. Tuning acoustic guitars with an electronic tuner's built-in microphone can be frustrating. You can get electronic tuners that clip onto the headstock and respond to the vibrations of the instrument. They are cheap and I heartily recommend them. – slim Sep 28 '11 at 14:30

28/1/2019 · Tuning String to String. The strings of a guitar start at a low E and progress as A, D, G, B, then a high E. One way to memorize this string pattern is the sentence “Elephants And Dogs Got Big Ears”, a tool that has different variations and is often used in guitar lessons. Typically, it is advantageous to tune the sixth string, the high E, and then tune the other strings from that note.

This produces a tuning of E-B-E-G?-B-E. Open D tuning: An open D tuning requires lowering your sixth string to D, your third string to F?, and your first string to D. The final product is D-A-D-F?-A-D and it sounds a D major chord when open strings are strummed. If you want to explore further, you can also try what's known as the D-A-D-G ...
