4/11/2018 · Insect outbreaks facilitated by climate warming could potentially drive transitions from high to low tree cover states. We investigated whether two key premises for such outbreak-induced transitions—critical thresholds (tipping points) and positive feedbacks that could maintain alternative states—are present in the northern-boreal mountain birch forest of Fennoscandia.

symptoms (Daugherty et al., 2011; Marucci et al., 2005). This behavior may be advantageous for these insects: water stressed- and *X. fastidiosa*-infected plants have some shared physiological

1/8/2013 · P. Barbosa, A.A. Agrawal, D. Letorneau (Eds.), Insect Outbreaks Revisited, Blackwell Science, Chichester, United Kingdom (2012), pp. 269-290 Google Scholar This is the first exploration of data indicating pest outbreaks in the fossil record.

A life table shows how and how many insects die as they mature from eggs to adults. It helps with pest control by identifying at what life stage pest insects are most vulnerable and how mortality can be increased. A cohort life table tracks organisms through the stages of life, while a static life table shows the distribution of life stages among the population at a single point in time.
