This course is an introduction to the fundamental principles of statistical science. It does not rely on detailed derivations of mathematical concepts, but does require mathematical sophistication and reasoning. It is an introduction to statistical thinking/reasoning, data management, statistical analysis, and statistical computation.

The fields of economics, business, psychology, education, biology, law, computer science, police science, and early childhood development require at least one course in statistics. Included in this chapter are the basic ideas and words of probability and statistics. You will soon understand that statistics and probability work together.

Mathematical Statistics. Mathematical statistics is the application of Mathematics to Statistics, which was initially conceived as the science of the state — the collection and analysis of facts about a country: its economy, and, military, population, and so forth.

Mathematics (from Greek: $\mu\alpha\theta\eta\mu\alpha$, $\mu\alpha\theta\eta\mu\alpha$, 'knowledge, study, learning') includes the study of such topics as numbers (arithmetic and number theory), formulas and related structures (\mathbb{R}), shapes and spaces in which they are contained (\mathbb{R}^n), and quantities and their changes (calculus and analysis). There is no general consensus about its exact scope or epistemological status.
