3 ?leri Fotojeoloji Ders Notlar?, Kadir Dirik, 2006 1. INTRODUCTION Photogeology is the interpretation of the geological and geomorphological features as well as various lithofacies on the aerial photographs. Some other terms such as "aerogeology" and "airgeology" are also used. Aerial photographs are a source of geological information that may be unobtainable

Remote sensing includes any detecting or mapping techniques carried out from aircraft or spacecraft. Thus, all airborne geophysical methods are included together with aerial photography, imaging systems and air sampling methods. In this chapter, however, airborne geophysical methods will be excluded since they are described in Chapter 6.

Photogrammetry and Remote Sensing Division Indian Institute of Remote Sensing, Dehra Dun Abstract : Remote sensing is a technique to observe the earth surface or the atmosphere from out of space using

satellites (space borne) or from the air using aircrafts (airborne). Remote sensing uses a part or several parts of the electromagnetic spectrum.

Photogeology Photogeological research represents a systematic study of geological relationships by usage of photographs taken from the air. Photogeology is used in all phases of the map production, depending how photogenic is the terrain. In the preparatory phase on the basis of photogeology the main relationships in the study area can be assumed.

Spectral signatures are the characteristic curves associated with different surfaces (including types of vegetation) that show the extent to which EMR of a particular wavelength is reflected. Whereas the albedo tells you the proportion of total radiation that is reflected, the spectral signature tells us which wavelengths are either absorbed (a trough in the spectral signature) or reflected (a ...

S.M. Gandhi, B.C. Sarkar, in Essentials of Mineral Exploration and Evaluation, 2016 4.1 Introduction. Remote sensing has been utilized as a device for finding potential exploration targets from the initial stage of photogeology. The quality of remotely detected information has expanded as the level of technology has improved.
