Ironbark Ridge Estate Stage 2A, Muswellbrook GS ref 928-005/0, February 2012 Appendix B of AS 2870-2011 indicates that to reduce but not eliminate the possibility of damage, trees should be restricted to a distance from the building $\frac{3}{4} \times$ the mature height for Class M sites and equivalent to the mature height of the trees for Class H1 sites.

Ironbark is a common name of a number of species in three taxonomic groups within the genus Eucalyptus that have dark, deeply furrowed bark.. Instead of being shed annually as in many of the other species of Eucalyptus, the dead bark accumulates on the trees, forming the fissures.It becomes rough after drying out and becomes impregnated with kino (red gum), a dark red tree sap exuded by the tree.
