

Helsinki University of Jyväskylä Abstract State space modelling is an efficient and flexible method for statistical inference of a broad class of time series and other data. This paper

9/6/2017 · State space modeling is an efficient and flexible method for statistical inference of a broad class of time series and other data. This paper describes the R package KFAS for state space modeling with the observations from an exponential family, namely Gaussian, Poisson, binomial, negative binomial and gamma distributions.

Package KFAS provides tools for modelling exponential family state space models such as structural time series, ARIMA models, generalized linear models and generalized linear mixed models. Paper at JSS. If you use KFAS in your paper, please cite it properly, see citation ("KFAS") in R, or above link to the paper.

As noted inTusell (2011), these gains can somewhat cancel out as more calls to linear algebra functions are needed and the memory management might not be as eective as working

22/5/2021 · However, a modeling framework incorporating stochastic models, likelihood calculation, prediction intervals and procedures for model selection, was not developed until recently. This book brings together all of the important new results on the state space framework for exponential smoothing.
