History of the concept of emerging infectious diseases. The French doctor Charles Anglada (1809–1878) wrote a book in 1869 on extinct and new diseases. He did not distinguish infectious diseases from others (he uses the terms reactive and affective diseases, to mean diseases with an external or internal cause, more or less meaning diseases with or without an observable external cause).

The contents of the lecture note are gathered and compiled from a variety of sources including notes from my student days, books, journals. from WHO manuals , bulletins over the years. And I also took ... • Infectious diseases like malaria are more prevalent in pregnant

•Infectious plant diseases are caused by living organisms that attack and obtain their nutrition from the plant they infect. The parasitic organism that causes a disease is a pathogen. Numerous fungi, bacteria, viruses, and nematodes are pathogens of corn and soybean in Iowa. •The plant invaded by the pathogen and serving as its

in a moderate or severe form within a defined area. Endemic diseases usually become indigenous following initial introduction of the pathogen. Epidemiology is the study of factors affecting the outbreak and spread of infectious disease. The epidemic rate is the increase or decrease per unit or time in a given plant population.
