210 Longitudinal Structural Equation Modeling other variables or parameter distributions). As mentioned, when the number of groups is small, multiple-group models are the preferred approach. Multiple-Group Longitudinal SEM Multiple-group SEM is a relatively straightforward extension of the single-group approach I presented in Chapter 6.

Featuring actual datasets as illustrative examples, this book reveals numerous ways to apply structural equation modeling (SEM) to any repeated-measures study. Initial chapters lay the groundwork for modeling a longitudinal change process, from measurement, design, and specification issues to model evaluation and interpretation.

SEM stands for structural equation model. Structural equation modeling is 1. A notation for specifying SEMs. 2. A way of thinking about SEMs. 3. Methods for estimating the parameters of SEMs. Stata's `sem` and `gsem` commands fit these models:
