Unlike a gasoline engine, a diesel engine does not require an ignition system because in a diesel engine the fuel is injected into the cylinder as the piston comes to the top of its compression stroke. When fuel is injected, it vaporizes and ignites due to the heat created by the compression of the air in the cylinder.

how the diesel engine and turbo charger interact, that the compressor supplies air to the engine through an air cooler, and that the engine feeds the turbine with exhaust gases to drive the compressor. Providing the turbocharger is kept adequately clean during operation, its performance will stay at a high level for a long period of time.

- In a small engine, the boost pressure produced in the low rev ranges is not sufficient to generate high torque - High thermal loading Current charged engines mostly use turbochargers. The 1.4l TSI engine is the first to use a combination of supercharger and turbocharger. That means the engine is charged by a supercharger in addition to the
