Reading Making Data Work

The core data object for holding data in R is the `data.frame` object. A `data.frame` is a rectangular data object whose columns can be of different types (e.g., numeric, character, logical, Date, etc.). The `data.frame` object, however, is not designed to work efficiently with time series data. In

Getting ready with data Gather all important data, analyses, plots and tables Organize results so that they follow a logical sequence (this may or may not be in the order of experiments conducted) Consolidate data plots and create figures for the manuscript (Limit the ...

Option 1a: start with smaller data •If your data come from a database, you may be able issuing a SQL query directly from R to get just the subset of the data you want. –Look into the 'RODBC' or 'RMySQL' packages if this is appropriate for your scenario –(But I can't demo it without a DB to connect to) SQL is the lingua franca of

Database development includes naming objects consistently. You do this by using the assigned naming conventions for each object within Access 2007. Naming conventions are not

mandatory, but they do make your work consistent and organized. If you plan on sharing a database with others, it's recommended to use them. d . The Leszynski Naming ...

all your recovered data to his drive. - If you don't have a second working computer, you can also set up your old system as the Recovery Computer.
