system that strives to input data once and make it available to people across the company for different purposes.

Information security management (ISM) defines and manages controls that an organization needs to implement to ensure that it is sensibly protecting the confidentiality, availability, and integrity of assets from threats and vulnerabilities. The core of ISM includes information risk management, a process which involves the assessment of the risks an organization must deal with in the management ...

Professor Laudon has also written more than 40 articles concerned with the social, organizational, and management impacts of information systems, privacy, ethics, and multimedia technology. Professor Laudon's current research is on the planning and management of large-scale information systems and multimedia information technology.

Chapter Summary. Marketing information systems are intended to support management decision making. Management has five distinct functions and each requires support from an MIS. These are: planning, organising, coordinating, decisions and controlling. Information systems have to be designed to meet the way in which managers tend to work.
