In article number 2001047, Sanming Hu and co-workers propose a tensor holographic metasurface using addition theory for impedance modulation. The metasurface simultaneously controls two orthogonally polarized non-diffractive Bessel beams. This topology can be further extended to independently manipulate multiple beams with desired polarization, depth-of-field and propagation direction.

technology and ...

As the material is derived from plant fibers, it creates low environmental impact in its production and disposal. Among its outstanding characteristics, it is lightweight, has an elastic modulus as high as that of high-strength aramid fiber, exhibits thermal expansion on par with glass, and presents high barrier properties with regard to oxygen and other gases.
