Equation Problems of Age. Equations are a convenient way to represent conditions or relations between two or more quantities. An equation could have one, two or more unknowns. The basic rule is that if the number of unknowns is equal to the number of conditions, then these equations are solvable, otherwise not. We will see some important examples here but first, let us see the following tricks.

The actual Trades Math Assessment Test will have 30 questions, few multiple choice, on it. On the actual assessment test, do not skip any problems that you might know how to solve as the software will assume that you cannot solve that type of problem. For these practice problems, solve as many as you can on your own, and then try to learn as

The first article Mathematical Problem Solving in the Early Years pointed out that young children are natural problem setters and solvers: that is how they learn. This article suggests ways to develop children's problem solving strategies and confidence. Problem solving is an important way of learning, because it motivates children to connect previous knowledge with new situations and to ...
