on a transmission gear, the simple
formula for calculating gear ratios is:
 $\text{Ratio} = \text{Driven} \div \text{Drive}$. So if the drive gear
has 10 teeth and the driven gear 20 teeth,
the ratio equals 2. This is expressed as a 2:1
or a 2.00 ratio. The drive gear must make
two turns to make the
driven gear turn once. Any ratio with
a number greater than 1 is an under-drive ratio.

gear ratios in the five speed transmission with the exception of overdrive. The manual shift indicators are the same in both the 4 and 5 speed units, and are as follows, P,R,N,D,3,2,L. This makes it very difficult to identify the transmissions apart when laying on the floor, ...

19/3/2003 · It's been a few years, but from memory a VL box looks to be smaller than a RB20DET gearbox which is way smaller than a RB25DET box. We have used RB25DET boxes up to 620 bhp with no problems, so they are way tough. This is my understanding of the ratios; 1 3.321. 2 1.902. 3 1.308. 4 1.000. 5 0.759. R 3.382. Diff 4.363. Hope that helps

(3.3 : 1). Since the drive is indirect at all times, any change in ratio can be made through the gearbox. The drive

Now that we have the gear ratio and transmission ratio worked out, we can work out the final drive ratio. To do this, you multiply the transmission ratio by the gear ratio. In our example, it is _____ $2.5 \times 5 = 12.5$. Thus we have a final drive ratio of 12.5:1. So how do we use this information? Use it ...

17/7/2009 · well folks, truth is I have an 07
Dodge Dakota SLT 4x4 quad cab, 4.7 high
output auto trans, trailer tow package.
When I first posted, I was about pissed with
this tow haul mode, it puts your 5 speed
auto into 4th gear (which amounts to a 2.94
gear ratio even with 3.92s), but then the
first second it speeds up going down a
slight hill, it downshifts, engine breaking.
