21/1/2001 · Knowledge of freshman calculus is assumed. Although most students have seen vector dot and cross products, vector topics are introduced from scratch in the context of mechanics. The use of matrices (to tidily set up systems of equations) and of differential equations (for describing motion in dynamics) are presented to the extent needed.

$D_1$ ) in all inertial frames for events connected by light signals . The quantity on the left is called the spacetime interval between events  $a_1 = (t_1, x_1, y_1, z_1)$  and  $a_2 = (t_2, x_2, y_2, z_2)$  . The interval between any two events, not necessarily separated by light signals, is in fact invariant, i.e., independent of the state of relative motion of observers in different inertial ...
