Lynn M Taussig¹⁰, Aaron Hamvas^{7,11} and The Prematurity and Respiratory Outcomes Program Investigators Abstract Background: With improved survival rates, short- and long-term respiratory complications of premature birth are increasing, adding significantly to financial and health burdens in the United States. In response, in May 2010, the

We studied maximal expiratory flows at functional residual capacity ($V_{\text{max}} \text{ FRC}$) obtained by use of the chest compression technique in 9 infants who had signs of upper respiratory illness (URI) at the time of testing, and in 9 infants who were symptom-free but whose parents reported they had a URI in the previous month. When compared to 109 infants with no URI, infants with current URI had ...

Paediatric Respiratory Reviews offers authors the opportunity to submit their own editorials, educational reviews and short communications on topics relevant to paediatric respiratory medicine. These peer reviewed contributions will complement the commissioned reviews which will continue to form an integral part of the journal.

1/5/1993 · Background. Day-care attendance has been associated with an increased risk of hospitalization for lower respiratory tract illnesses (LRIs). This study examines, in a health maintenance organization population of children, the associations between child day care and the occurrence of LRIs in the first 3 years of life. Smoking by caregivers and a possible protective effect of longer day-care ...

Peter D. Sly, ... Wayne J. Morgan, in Pediatric Respiratory Medicine (Second Edition), 2008 **PEAK EXPIRATORY FLOW**. Peak expiratory flow (PEF) is the maximum flow achieved during a forced expiration starting from the level of maximal lung inflation. 37 Primarily a measure of large airway caliber, PEF can be used to identify and assess airflow limitation in clinical practice and epidemiologic ...
