The PMG (Permanent Magnet Generator) is a system which is used for secondary exciting. The PMG provides stable and reliable electric energy for AVR regardless the generator's terminal voltage. The generator with PMG excitation system can provide 300 % rated current during short-circuit, which occurs for 5-10 seconds.

The Physics of Permanent Magnets • the permeance P of the magnetic circuit determines the operating point of the permanent magnet: air gap thickness parallel the direction of flux in inches: magnetic reluctance factor - typically 1.1 - 1.5: magnet thickness parallel the direction of flux in inches: magnetic flux leakage $g_m F_g F_m P ? ? \dots$

Permanent magnets in synchronous machines are restricted to those with ratings much lower than large turbine-driven generators, which is the subject of this book. Turbine-driven generators (for short: turbogenerators) take advantage of the fact that magnetic fields can be created by the flow of electric currents in conductors. See Figure 1.3. NS

small hydro generator (50 KW), to be scaled up to large systems if successful. Provides an "Apples-to-Apples" comparison of an existing fixed speed induction generator to a new Variable Speed Permanent Magnet Generator. Steps taken: 1) Install data collection system 2) Collect data on existing system 3) Remove old induction generator system
