Engineers specializing in the design of pipe hangers have established efficient methods of performing the work required to arrive at appropriate hanger designs. However, the engineer who devotes varying portions of his time to the design of pipe hangers often must gather a considerable amount of reference data peculiar only to the hanger

this book as the reference source, are the B31 piping codes of the American Society of Mechanical Engineers (ASME). The B31 piping codes consist of several sections or books that describe the requirements for systems of a specific type. These can readily be broken into the two basic types—a piping system and a pipeline system.

PRESSURE RATINGS The pressurating of the pipe is associated to the maximum allowable working pressure. It is the ability of the pipe material to resist the internal pressure and pressure surges.

Pipe, fittings, valve controls, access panels or other equipment shall not extend into escape areas. 4.5 Pipe routing 4.5.1 Arrangement All piping shall be routed so as to provide a simple, neat and economical layout, allowing for easy support and adequate flexibility. Piping should be arranged on horizontal racks at specific elevations.

Pipe joint separation may result in significant property damage and serious injury. CAUTION: Use of an impact wrench is not recommended because the torque output can vary significantly due to many variables including air pressure supply, battery strength and operational variations.

Here's a presentation on piping engineering in PDF format, now available for all. This presentation covers the basics points of piping, which are meant for those persons who are first time entering our EPC industry. This presentation covers various aspects of piping engineering like: Function of piping engineering Piping engineering team

14/7/2018 · Piping is an important element of every stage of project design, purchasing and construction. It is intimately linked to the other project work on equipment, electrical, instrument and civil engineering. Work on piping is proceeding at every stage of the project, partly because of the sheer volume of design and erection work, but mainly because of the need to relate other project activities to ...
