after your breast cancer surgery to decide about reconstruction. You might not want to have more surgery than is absolutely needed. Not all reconstructive surgery is a total success, and the result might not look the way you'd hoped. The cancer surgery and reconstruction surgery will leave scars on ...

Principles Of Cancer Reconstructive Surgery is a reference text for medical and surgical oncologists, radiation oncologists, family practice physicians and dermatologists, providing an overview for reconstructive procedures. Interested residents, medical students and health care professionals may find this to be a resource for information on reconstructive plastic surgery.

The principles of cancer reconstruction are rather broad, but can be better understood by dividing them into five key points: evaluation of the defect, the surgical goals, surgical options, the operative procedure, and finally outcome analysis.

Principles of Surgical Biopsy (1) yNeedle tracks or scars should be placed carefully so that they can be conveniently removed as part of the subsequent definitive surgical procedure. yCare should be taken to avoid contaminating new tissue planes during the biopsy procedure. yIt is not uncommon to take biopsy samples from several
