Solutions to Time value of money practice problems Prepared by Pamela Peterson Drake 1. What is the balance in an account at the end of 10 years if \$2,500 is deposited today and the account earns 4% interest, compounded annually? quarterly? Annual compounding: $FV = \$2,500 (1 + 0.04)^{10} = \$2,500 (1.4802) = \$3,700.61$ Quarterly compounding:

analysis, such as the so -called problem-solution pattern. According to the author the problem-solution pattern “arises as a result of the writer answering a predictable series

of questions which reflect the relationship between the sentences of the text. The order in which these questions are answered is, however, not fixed” (Hoey 2001: 140).

This is the same as Problem #1, so $Z = \int \sin w \, dw = -\frac{1}{2} (\sin w - \cos w) + C$. Plug back in $w = \ln x$: $Z = \int \sin(\ln x) \, dx = -\frac{1}{2} (x \sin(\ln x) - x \cos(\ln x)) + C$. 13. $\int \frac{x^3}{1+x^2} \, dx$ You can do this problem a couple different ways. I will show you two solutions. Solution I: You can actually do this problem without using integration by parts. Use the substitution $w = 1 + x^2 \dots$
