The Anatomy of a Die Cut A normal metal stamping process (creates a die cut) is to drive a sharpened tool steel punch through the sheet or strip material into a die cavity, where the slug or scrap is ejected. Cutting clearances between the punch and die are closely defined and specified in the die design stage, based on the requirement of the part.

good design delivers function, form and technology in objects that meet the needs of users without making demands on them. The well-designed object gives pleasure or at least satisfaction in use, and does what it should do without undue concern. In these Design Guides we will set out the basics of good design for plastics. The rules

1.2.2 Design Molds separate into two sides at a parting line, the A side , and the B side , to permit the part to be extracted. Plastic resin enters the mold through a sprue in the A plate, branches out between the two sides through channels called runners , and enters ...
