Aims: To study the clinical and microbial profile of childhood empyema in South Asia and to identify the changes over the past three decades. Methods: A total of 265 children (aged 1 month to 12 years) with empyema admitted to the Advanced Pediatric Center, PGIMER, Chandigarh, India in 1989–98, were reviewed retrospectively. Results and Conclusions: One third of children were under 5.

Criteria used by KDIGO for topic prioritization include the burden of illness based on prevalence and scope of the condition or clinical problem; amenability of a particular condition to prevention or treatment and expected impact; existence of a body of evidence of sufficient breadth and depth to enable the development of evidence-based guidelines; potential of guidelines to reduce variations ...
