This paper describes practical aspects of reservoir management and new approaches being used today, with emphasis on the multidisciplinary team approach. Case studies are presented that illustrate the effectiveness of this approach. In addition, specific attributes of a successful reservoir-management organization and program are highlighted.

Reservoirs range in size from pond-like to large lakes, but in relation to natural lakes the range of reservoir types and morphological variation is generally much greater. For example, the most regular, and the most irregular, water bodies are likely to be reservoirs. This variability in reservoirs, allied to management intervention, ensures that

Reservoir management is a process where a team comprising of reservoir engineers, reservoir geologists, production and facilities engineers and field operations staff is responsible for developing and implementing a reservoir management plan. Specifically and Technically .
