and solutions suitable to most classroom content domains (e.g., statistics). Solving ill-defined problems may necessitate specific skills or require a different way to frame solutions to problems (Jonassen, 2000). Well-defined problems, such as most problems taught in

10. I use different tactics when solving exercises and problems. 6 11. I use an evidence-based systematic strategy (such as read, define the stated problem, explore to identify the real problem, plan, do it, look back). I am flexible in my application of the strategy. 12. I monitor my thought processes about once per minute while solving problems.

In solving these problems you might find the following useful. • Gamma functions: Let a and b be positive. Then $\int_0^{\infty} x^{a-1} e^{-bx} dx = \frac{\Gamma(a)}{b^a}$ where $\Gamma(a) = \int_0^{\infty} x^{a-1} e^{-x} dx = (a-1)\Gamma(a-1)$. If a is a positive integer then $\Gamma(a) = (a-1) \dots$

solving the problem is the only way it will sink in. This piece of advice on how to use this book is so important that I'm going to repeat it and display it prominently in a box: 1Introduction to Classical Mechanics, With Problems and Solutions, David Morin, Cambridge University Press, 2008. This will be referred to as "Morin (2008)." vii

NUMERICAL ANALYSIS PRACTICE PROBLEMS 7 Problem 33. Convert $d^2x/dt^2 + x = 0$ to a first-order differential equation. Solve over the interval $[0; ?]$ with $h = ?/10$ assuming the initial conditions $x(0) = 1$ and $x'(0) = 0$. Use the program linearode. Problem 34. Convert $d^3x/dt^3 + x = 0$ to a first-order differential equation. Solve this equation

1 Statistical Inference Problems In probability problems, we are given a probability distribution, and the purpose is to analyze the property (Mean, variable, etc.) of the random variable coming from this distribution. Statistics is the converse problem: we are given a set of random variables coming
