Tekla Structures is BIM (building information modeling) 3D software capable to model structures that include various types of building materials, including steel, timber, concrete, and glass. Tekla Structures used to create stadiums, plants, and factories, offshore structures...

Tekla - Wikipedia

Tekla Structures is 3D building information modeling (BIM) software used in the building and construction industries for steel and concrete detailing, precast and cast in-situ. The software enables users to create and manage 3D structural models in concrete or steel, and guides them through the process from concept to fabrication. The process of shop drawing creation is automated.
