Telemetry is an observation tool that allows continuous ECG, RR, SpO<sub>2</sub> monitoring while the patient remains active without the restriction of being attached to a bedside cardiac monitor. The patient group requiring telemetry are children diagnosed with a known/unknown arrhythmia, children at risk of an arrhythmia, or children anticipated to be at risk of sudden cardiac deterioration.

monitoring in hospital settings have been established for arrhythmias, ischemia, and corrected QT (QTc) intervals (Drew et al., 2004). Due to these advances, nurses who work in telemetry and critical care units in hospitals have an important responsibility to monitor patients' cardiac rhythms appropriately and to intervene promptly.
