client utilities. Teradata RDBMS is able to support JDBC programs in both forms of application and
applet. The client installation manual mentions that we need to install JDBC driver on client
computers, and we also need to start a JDBC Gateway and Web server on database server. Teradata
supports at least two types of JDBC drivers.

In this manual, italics are also used to denote Word Serial commands and queries.

Teradata Parallel Data Pump (TPump) Main use: to load or update a small amount of target table rows. Sends data to a database as a statement which is much slower than using bulk mode. TPump uses row-level hash locks. Resource consumption: loading speed can be adjusted using a built-in resource consumption management utility.
