Div. 6 (Behavioral Neuroscience and Comparative Psychology) members study behavior and its biological underpinnings. Specifically, behavioral neuroscientists link the inner workings of the brain to behavior and other body systems. Comparative psychologists study similarities and differences in the behavior of humans and other animals, aiming to ...

The quantitative trait locus (QTL) method is based on a comparison between the allelic frequency of DNA markers and quantitative behavioral traits. 146,150 It has been used to assess gene effects on fear, emotionality, and anxiety-related behaviors in mice from various genetic backgrounds. 140,151 Loci on mouse chromosomes 1, 4, and 15 were found to operate in four tests of anxiety, whereas ...
