Sound Intensity and Sound Level | Physics

The decibel level of a sound having the threshold intensity of 10^{-12} W/m^2 is $\beta = 0$ dB, because $\log_{10} 1 = 0$. That is, the threshold of hearing is 0 decibels. Table 1 gives levels in decibels and intensities in watts per meter squared for some familiar sounds.

Resonance - Wikipedia

Overview. Resonance occurs when a system is able to store and easily transfer energy between two or more different storage modes (such as kinetic energy and potential energy in the case of a simple pendulum). However, there are some losses from cycle to cycle, called damping. When damping is small, the resonant frequency is approximately equal to the natural frequency of the system, which is a ...
