Pudendal nerve block (PNB) is performed for differential diagnosis and treatment of chronic pelvic and perineal pain. Several block methods, such as transvaginal, transperineal, computerized tomography-, ultrasound- and fluoroscopy-guided approach are currently under practice.

1/3/2016 · Background and Objectives Ultrasound-guided techniques for pudendal nerve block have been described at the level of the ischial spine and transperineally. Theoretically, however, blockade of the pudendal nerve inside Alcock canal with a small local anesthetic volume would minimize the risk of sacral plexus blockade and would anesthetize all 3 branches of the pudendal nerve before they ramify ...

1/7/2017 · Techniques for pudendal nerve blocks described include: 1. anatomical landmarks 15; 2. neurostimulation^{6, 66}; 3. fluoroscopy 49; 4. tomography^{67, 68, 69}; and, more recently, blockage guided by ultrasound.^{1, 7, 49, 59, 70, 71, 72} We believe that ultrasound is better than other techniques in terms of practical use and results ⁷¹ and, therefore, we will focus on the sonoanatomic descriptions that enable ...

The pudendal nerve is formed by the anterior division of the S2, S3, and S4 spinal nerves. The nerve, accompanied by the pudendal artery, emerges from the greater sciatic notch at the level of the ischial spine and reenters the pelvis through the lesser sciatic notch, between the sacrotuberous and sacrospinous ligaments. Then it runs in the fascia found

Pudendal Nerve Block . What is the purpose of these procedures? Pudendal nerve blocks are useful to evaluate and manage groin and pelvic pain around the genitals, perineum and anus. The nerves in these areas may be injured by trauma or become trapped between muscles or in scar tissue, resulting in chronic (long-lasting) pain.
