WebSphere Application Server (WAS) is a software product that performs the role of a web application server. More specifically, it is a software framework and middleware that hosts Java-based web applications. It is the flagship product within IBM's WebSphere software suite. It was initially created by Donald F. Ferguson, who later became CTO of Software for Dell.

IBM WebSphere Application Server accelerates application delivery with a highly reliable Java Enterprise Edition-based runtime environment. It supports microservices and standards-based programming models designed to help you modernize at your own pace, gain visibility across workloads, analyze enterprise applications and advance your journey to Kubernetes.
